

FOR PHARMACY AND HEALTHCARE STOCK TEAMS

Pharmacy & Inventory

**Clearer medicine records.
Better stock visibility.**

Connect medicine records, purchases, dispensing, stock movement and procurement in one organised pharmacy and inventory workflow.

Pharmacy illustration from the Medoho product page.

PHARMACY

Connected prescriptions and dispensing activity.

INVENTORY

A clearer view of purchases, issues and stock.

MANAGEMENT

Stock alerts, procurement and operational visibility.

UNDERSTAND THE MODULE

What is Pharmacy & Inventory?

Pharmacy management connects prescriptions and dispensing. Inventory management organises medicine and item records, purchases, issues and stock movement.

One connected medicine and stock workflow

Medoho connects medicine records, pharmacy activity and stock movement, helping your team review availability, manage purchases and plan procurement.

WHAT YOU CAN WORK WITH

Medicine and item records

Maintain medicine and item details as a shared reference for purchasing, dispensing and stock review.

Stock visibility

Review recorded quantities and stock movements for a clearer view of medicine and item availability.

Automated alerts

Use available automated alerts to flag stock that needs attention. Confirm the relevant alert rules for your setup.

Purchases and procurement

Organise procurement and purchases with stock records, helping the team review requirements before the next order.

Prescriptions and dispensing

Connect prescription information with pharmacy activity, keeping the patient and visit associated with dispensing work.

Issues and stock movement

Track stock issues and movements so outgoing items are recorded alongside purchases and available quantities.

Branches and departments

Review pharmacy and stock information across configured branches and departments, according to your setup and access.

Operational reports

Use available reports to review recorded pharmacy activity and inventory records rather than combine separate registers.

Available modules, alert rules, location visibility and access depend on the selected plan and configuration.

MEDICINE RECORDS AND STOCK VISIBILITY

Give your team a clearer stock view.

Connect medicine and item information with the activity that changes recorded stock.

SCENARIO 01 / MEDICINE AND ITEM RECORDS

The same item is described differently across separate lists.

THE PROBLEM

Medicine and item information is maintained in separate lists. Purchasing and dispensing staff use different descriptions, making it harder to confirm they are working with the same recorded item.

HOW MEDOHO HELPS

Maintain medicine and item records as a shared reference. Connect purchasing, pharmacy activity and stock movement to those records so the team can review the relevant item information together.

What your team gains: A consistent reference helps staff coordinate medicines and stock without comparing separate item lists.

SCENARIO 02 / STOCK AVAILABILITY

The stock list does not bring recent movements together.

THE PROBLEM

Purchases are written in one register and issues are recorded elsewhere. Staff have to check separate entries to understand how recent activity affects medicine and item availability.

HOW MEDOHO HELPS

Keep purchases, issues and stock movement organised in a connected inventory workflow. Review recorded quantities with the supporting activity for a clearer reference on stock availability.

What your team gains: A clearer stock record supports availability checks using connected purchase and issue information.

Stock team gets: medicine and item records, recorded quantities and a connected view of stock movement.

ALERTS AND PURCHASING

Plan the next purchase with context.

Use stock information, available alerts and purchasing records to guide procurement work.

SCENARIO 03 / STOCK ALERTS

A shortage is noticed only when an item is needed.

THE PROBLEM

Without regular stock review, staff may not notice an item that needs attention until dispensing or department use. Purchasing then becomes reactive.

HOW MEDOHO HELPS

Use stock monitoring and available automated alerts to identify recorded stock that needs attention. Confirm alert rules for your setup and review the relevant items before planning the next purchase.

What your team gains: Stock information and alerts can help the team notice purchasing needs earlier.

SCENARIO 04 / PROCUREMENT PLANNING

Items are ordered again without checking existing stock.

THE PROBLEM

The purchasing team prepares the next order without a consolidated view of stock or recent purchases. Items may be ordered again while existing quantities are still available.

HOW MEDOHO HELPS

Manage procurement alongside purchase records and stock visibility. Review recorded availability and recent stock movement before deciding what needs to be ordered for the pharmacy or department.

What your team gains: Procurement decisions can use available stock information, helping the team plan purchases with more context.

Purchasing team gets: procurement records, purchase activity and available stock alerts for review.

DISPENSING AND STOCK ISSUES

Connect dispensing and stock.

Keep pharmacy work linked to the patient and record outgoing medicine and item movement.

SCENARIO 05 / PRESCRIPTION HANDOVER

Prescription details and pharmacy activity are disconnected.

THE PROBLEM

Prescription information and dispensing work are handled separately. Pharmacy staff check patient and visit details again, while the dispensing record remains outside the connected patient journey.

HOW MEDOHO HELPS

Connect prescriptions with the dispensing workflow and keep pharmacy activity linked to the patient and visit. Staff can use the available visit context when recording the relevant pharmacy work.

What your team gains: A clearer prescription-to-pharmacy handover helps staff organise dispensing around the patient and visit.

SCENARIO 06 / OUTGOING STOCK

Stock leaves the store, but the issue is not recorded.

THE PROBLEM

Stock is issued for pharmacy or department use, but the entry stays on a loose note. Staff cannot easily bring outgoing activity into the next stock review.

HOW MEDOHO HELPS

Track recorded issues and stock movements with the item records. Keep outgoing activity organised alongside purchases so authorised staff can review how recorded stock has moved.

What your team gains: Recorded issues help the team understand outgoing stock activity alongside incoming purchases.

Pharmacy team gets: connected dispensing and issue records. Medicine decisions remain with qualified professionals.

LOCATIONS AND OPERATIONAL REVIEW

Make stock activity easier to review.

Help authorised teams review pharmacy and inventory information across the relevant locations.

SCENARIO 07 / BRANCHES AND DEPARTMENTS

Stock information is spread across location-level lists.

THE PROBLEM

Each branch or department keeps its own stock information. Owners and managers have to ask multiple teams for updates before they can review activity across their organisation.

HOW MEDOHO HELPS

Use branch and department visibility available in the selected setup to review pharmacy and stock information. Keep the review organised around the relevant location and authorised staff access.

What your team gains: Configured location visibility helps management review pharmacy and stock activity with less chasing.

SCENARIO 08 / OPERATIONAL REPORTING

The daily stock review depends on manually gathered totals.

THE PROBLEM

Purchases, issues and pharmacy activity are recorded in separate places. Management spends time gathering the information instead of reviewing what has happened during the working day.

HOW MEDOHO HELPS

Use available operational reports and inventory records to review recorded pharmacy activity, purchases and stock movement. Keep the review based on the connected information maintained by the team.

What your team gains: Decision-makers get a more organised reference for reviewing pharmacy activity and stock records.

Management gets: available reports and configured branch or department visibility for operational review.

THE EVERYDAY WORKFLOW

One connected stock cycle.

An illustrative workflow from item records and purchasing through dispensing to stock review.

01

Maintain the medicine and item records

Set up the recorded medicine and item information that the purchasing, pharmacy and stock teams will use.

02

Review availability and alerts

Check recorded quantities, recent movement and available stock alerts before planning what needs attention.

03

Organise procurement and purchases

Review purchasing needs and maintain purchase activity with the connected inventory records.

04

Connect prescriptions and dispensing

Keep pharmacy activity associated with the patient and visit when using the connected prescription workflow.

05

Record stock issues and movement

Maintain outgoing activity alongside purchases so the team can review how recorded stock has changed.

06

Review operations and locations

Use available reports and configured branch or department visibility to review pharmacy and inventory activity.

A clearer view of the stock workflow

Medicine records, purchases, dispensing and stock review stay connected to the recorded activity.

FOR YOUR PHARMACY AND STOCK TEAM

Put your stock workflow in order.

For pharmacies, hospital pharmacy departments, clinic dispensaries and healthcare stock teams.

YOUR PHARMACY AND INVENTORY TOOLKIT

Medicine and item records; recorded stock visibility; available automated alerts; procurement and purchase activity; prescription-linked dispensing; stock issues and movements; operational reports; and configured location visibility.

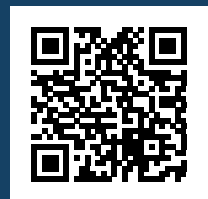

PLAN YOUR SETUP

- 01 Map your items and locations** - Identify medicine and healthcare stock records, branches and departments.
- 02 Define staff responsibilities** - Confirm who will handle purchasing, dispensing, stock entries and operational review.
- 03 Map the connected workflows** - Discuss prescription, patient and visit links, and any billing modules needed alongside pharmacy.
- 04 Confirm stock details and alerts** - Agree available alert rules and any requirements for batch, expiry or return workflows.
- 05 Walk through a complete cycle** - Check purchases, dispensing, stock issues, quantity review and available reports.
